Park Place Packaging

The Wrap Pack models are fully automatic Wrap-Around Casers, which will accumulate the product, load the accumulated pattern onto a flat corrugated blank, form the blank around the product load and seal it into a shippable container. The base machine can be supplied with a product infeed to handle practically any product such as cans, cartons, bottles, multi-packs, tubs, blocks, floor tile, hardware

items, etc. The wrap-around case provides a shipping container that offers greater product protection and merchandising value at a lower cost.

Better Product Protection

In the Wrap Pack system the flat corrugated blank wraps tightly around the product load, using the product as a mandrel. Accordingly, product movement and subsequent damage is significantly reduced. Packing cans this way reduces potential chime riding with attendant can denting and label scuffing. Tightly wrapped carton products have greater stacking strength, less face-to-face rubbing and the possibility of carton bulge is prevented.
