

Wrap-Around Concept

Park Place Packaging

- **Vacuum Blank Feed** – Minimizes blank feed problems caused by variations in board thickness, warped board or damaged blanks.
- **Case Tightness** – Achieved by forming the case around the product. Enhances package-stacking strength while increasing product protection during distribution.
- **Adhesive System** – Hot Melt, Cold Glue or Taping is available, depending on package requirements and customer preferences.
- **Trays** – Are horizontally discharge at a height suitable for entry into a shrink-film system.
- **Vertical Compression** – Seals the cases squarely and tightly to ensure maximum product protection.
