

# Wrap Pack-II Case Packer

## *Park Place Packaging*

The Wrap Pack II is a fully automatic Wrap-Around Caser, which will accumulate the product, load the accumulated pattern onto a flat corrugated blank, form the blank around the load and seal it into a shippable container. This machine is sequence controlled which offers excellent flexibility for running multiple package sizes. The base machine can be supplied with a product infeed to handle practically any product such as cans, cartons, bottles, multi-packs, tubs, blocks, floor tile, hardware items, etc. The wrap-around case provides a shipping container that offers greater product protection and merchandising value at a lower cost.

### Features

- **MATERIAL SAVINGS:** Wrap pack wrap-around blanks use up 25% less board than regular RSC containers.
- **LABOR SAVINGS:** Eliminates costly hand packing and one operator can monitor two or more machines.
- **BETTER PRODUCT PROTECTION:** In the Wrap Pack System the flat blank wraps tightly around the product load, using the product as a mandrel. Accordingly, product movement and subsequent damage is significantly reduced. Packing cans this way reduces potential chime riding with attendant can denting and label scuffing. Tightly wrapped carton products have greater stacking strength, less face-to-face rubbing and the possibility of carton bulge is prevented.
- **LOWER STORAGE AND SHIPPING COST:** The flat container blanks require approximately 25% less storage space and save on shipping cost over regular RSC regular RSC containers.
- **LOWER ADHESIVE COST:** Resulting from reduced flap area.
- **INCREASED PRODUCTIVITY:** Elimination of hand labor enables consistent production output.
